Yes, the borough is it's own electrical utility. (I wish they weren't) I can't say that they require "Smart Meters" but they would not allow "Net Meters" required by SunRun. This seems to be contrary to the State program encouraging Solar Panels. Certainly all the major utilities will support the required metering. There are two towns in the state that have their own electric company. I had to pick one of them to live in!

Gene,

Please find the attached file which is the contract with SunRun that crashed and burned because of the borough restrictions.

I will be interested to see what your technical folk say about the meters allowed by the borough. Assuming that it will still be a no go is there any recourse to the state regulatory agencies that you are aware of?

Thanks for your input.
